The UN Climate Change Conference (COP 26) in Glasgow, United Kingdom is a crucial opportunity to achieve pivotal, transformational change in global climate policy and action. It is a credibility test for global efforts to address climate change and it is where Parties must make considerable progress to reach consensus on issues they have been discussing for several years. COP 26 comes against the background of widespread, rapid and intensifying climate change impacts, which

## Increase in landslides and storm surge damage due to climate change

"It is **unequivocal** that human influence has warmed the atmosphere, ocean and land." (IPCC AR6)

Increasing intensity and frequency of torrential rains, very low pressure cyclones, and typhoons due to the manifestation of extreme phenomena

Effective countermeasures against slope hazards and storm surge damage are a common **global challenge**

Recent **unregulated** land use changes in mountainous and coastal areas have caused serious damage

## Conclusions

### Towards more effective and accessible REDD+ Finance

- Role of multilaterals in REDD+ Aid – needs to also (d)evolve
- Concentrating aid from/to a few countries increases risks - spread the risk and burden
- Financial burden sharing - private sector contributions hard to track. Financial transparency in carbon transactions (price, volume, buyer, seller, trader) a must
- Facilitate market-based finance for REDD+ - benefit sharing, nesting rules, tenure, financial and technical capacity - key conditions
- Two funding flows fund the same objective - need to be linked to see where are the gaps

Fair and equitable REDD+ finance and benefit sharing mechanisms for climate goals and justice

# 所感

世界全体で気候変動緩和のためにさらなる努力が必要

- 森林（REDD+）による排出削減が必要不可欠
- REDD+はまだ未完成
  - Scaling up from project level to Jurisdictional level
  - High quality carbon credit

気候変動は避けられない

- 適応策：気候災害に備える必要
- 自然に基づく解決策：森林による防災・減災  
自分にとって特別な場所をしっかりと守る  
(森林の緩和機能により世界全体にも貢献できる)

**Takeshi Toma** 21:29

I liked to see concrete actions on the ground by JICA and partners. Thank you.

**Maria Nuutinen** 21:32

To the World Energy Council: The TEEB approach has been used to estimate the value of peatlands: <http://teebweb.org>

**Maria Nuutinen** 21:34

Thank you @Takeshi Tome, it is good to remember that many peatland actions are still in kind of initial phase, e.g. large-scale peatland mapping was published in 2017. There is also the delay with engaging with development partners and governments for the activities.

**Takeshi Toma** 21:37

It is important to keep acting to welcome new partners later on.
